Key findings

- The severely housing deprived or 'homeless' population has grown in size and scale over the last three censuses, at an accelerating rate. The prevalence of homelessness grew by 15 per cent between the 2006 and 2013 censuses, compared with a 9 per cent increase between 2001 and 2006.
- In 2013, there were at least 41,000 homeless New Zealanders, or about one in every 100 New Zealanders.
- Nelson, Auckland and Wellington regions saw the largest increases in homelessness between 2006 and 2013.
- Homelessness declined in Southland, Waikato, and Taranaki regions between 2006 and 2013.
- More than half (52%) of homeless adults are working, studying, or both.
- More than half (51%) the homeless population are younger than 25.
- People identifying as Pacific, Māori, or Asian groups are over-represented in the homeless population. Pacific New Zealanders are ten times more likely to be homeless than European New Zealanders.
- Migrants, especially new migrants, are at particular risk of homelessness.

Introduction

In 2016, the state of severe housing deprivation (or ‘homelessness’) in New Zealand has been the subject of unprecedented attention and concern. The issue is not new, but as this report shows, the accelerating prevalence of homelessness alone warrants a real policy focus, now more than ever.

This report updates our original Statisphere report [Severe Housing Deprivation: The problem and its measurement](#) (Amore et al., 2013), in which we developed a definition of severe housing deprivation and produced national statistics for 2001 and 2006. This current report extends the analysis to 2013, applying the same definition, classification, and method, which are summarised in this introduction. For readers interested in the conceptual and technical basis of the methodology, I direct you to the previous report, where it is discussed in detail.

Definition and classification

Severe housing deprivation refers to people living in severely inadequate housing due to a lack of access to minimally adequate housing. This means not being able to access an acceptable dwelling to rent, let alone buy.

This definition is supported by international literature, and has recently been adopted in a prominent global framework for conceptualising and measuring homelessness (Busch-Geertsema, et al., 2016). It has a firm grounding in New Zealand, being based on the official [New Zealand Definition of Homelessness](#) (Statistics New Zealand, 2009) which was developed by three government agencies – Statistics New Zealand, Housing New Zealand Corporation, and Ministry of Social Development.

Table 1 lists the living situations classified as severely inadequate according to this definition. These situations qualify as severely inadequate because they are lacking in two out of three core dimensions of housing adequacy: habitability; privacy and control; and security of tenure. Minimally adequate housing is a dwelling with all basic amenities, with the security of tenure of a standard tenancy. All New Zealanders should have access to such housing, notwithstanding the fact that some people have other options and the financial means to secure them.

Table 1 also shows the data sources used to measure each category of severe housing deprivation, and those categories that cannot be measured because no data are currently available.

Method

As per the previous report, two data sources were used to measure severe housing deprivation in 2013: Census and administrative data from emergency accommodation providers. Table 2 summarises the method for measuring severe housing deprivation, and Figure 1 shows the algorithm for identifying severely housing deprived people in census data.

Table 1 Classification of severe housing deprivation and data sources

Broad living situation		Specific living situation	Data source
1	Living <i>without habitable accommodation</i> due to a lack of access to minimally adequate housing	Living rough / improvised dwelling	Census
		Mobile dwelling	
2	Living in a <i>non-private dwelling</i> due to a lack of access to minimally adequate housing	Targeted at people who lack of access to minimally adequate housing	Emergency housing ⁽¹⁾ providers' administrative data
		Night shelter	
		Women's refuge	
	Not targeted at people who lack of access to minimally adequate housing	Other accommodation targeted at people who lack of access to minimally adequate housing	No data available
		Institution not targeted at people who lack of access to minimally adequate housing	
Camping ground / motor camp	Census		
Boarding houses, hotels, motels			
Marae			
3	Living as a <i>temporary resident in a private dwelling</i> due to a lack of access to minimally adequate housing	'Extra' people living in severely crowded, permanent private dwellings (excluding the hosts)	
4	Living in <i>rented or owned housing that lacks one or more basic amenities</i> due to a lack of access to minimally adequate housing		No data available

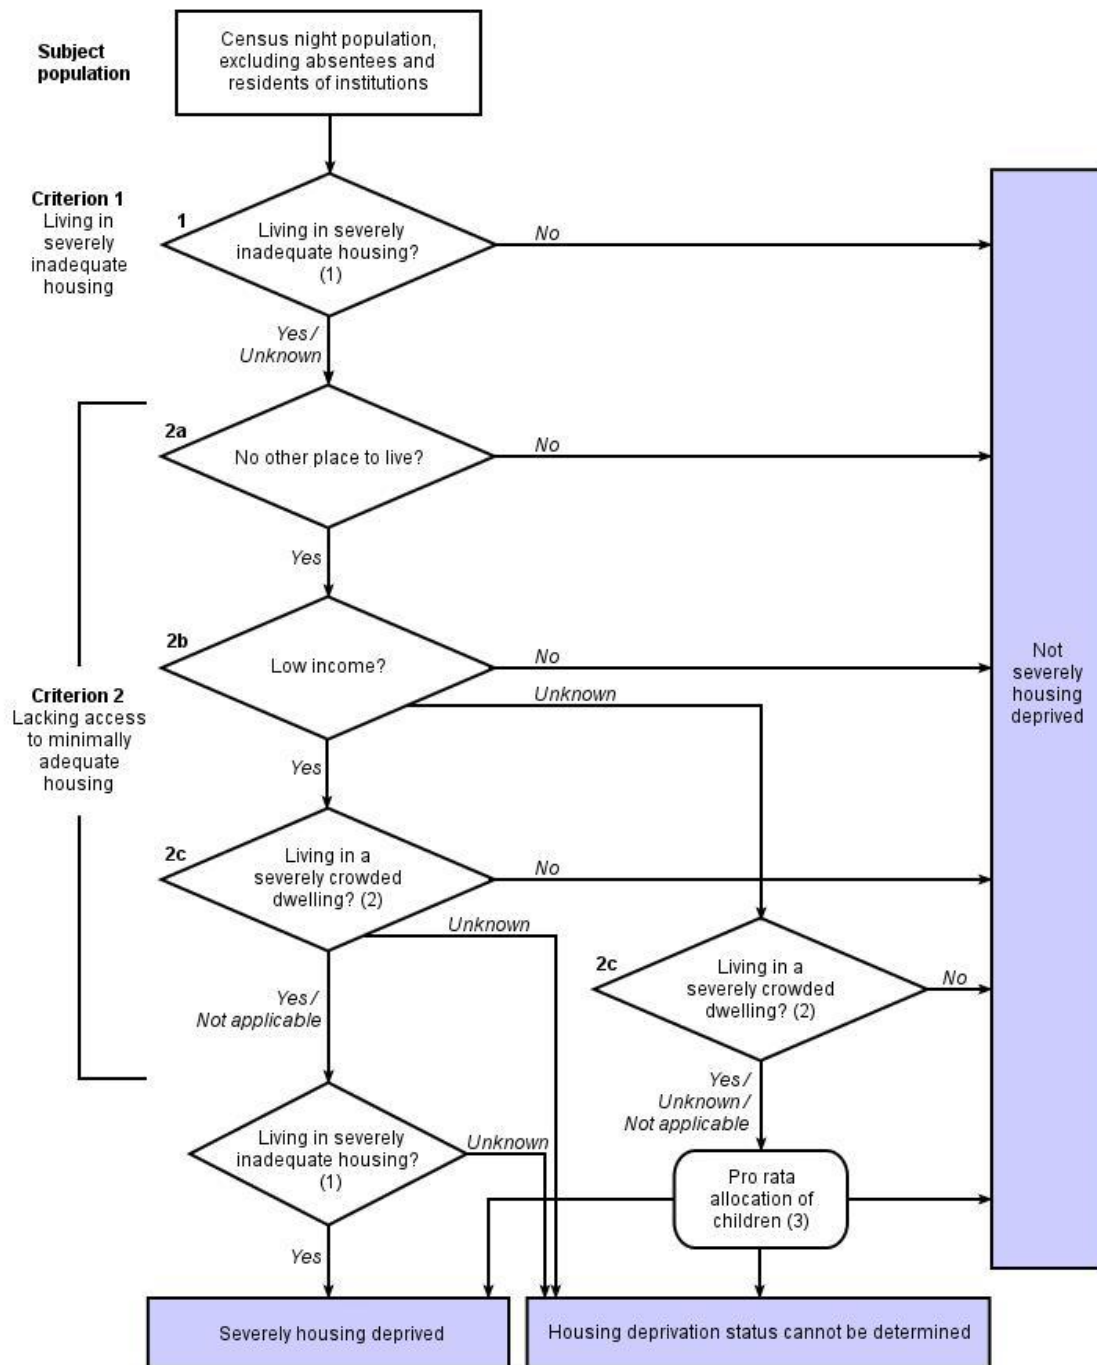

Note: (1) The term 'emergency housing' is used for consistency and for lack of a better umbrella term. It should be noted that all services have necessary restrictions on who they accommodate, and many are not 'emergency' services in that they do not provide immediate accommodation and are not open 24/7.

Table 2 Operational definitions of the severe housing deprivation categories

Severe housing deprivation category		Operational definition
1	Living <i>without habitable accommodation</i> due to a lack of access to minimally adequate housing	<p>Census data</p> <ol style="list-style-type: none"> 1. Living rough, in an improvised dwelling, or in a mobile dwelling not in a motor camp; and 2. Usual address 'same as census night' or 'no fixed abode'; and 3. Low income⁽¹⁾ (household-level, or individual-level if not part of a household); or 4. Income unknown and receiving a means-tested benefit (household-level, or individual-level if not part of a household).
2	Targeted at people who lack of access to minimally adequate housing	<p>Administrative data from emergency housing providers</p> <p>All people identified as living in night shelters, women's refuges, or other accommodation targeted at people who lack of access to minimally adequate housing on census night.</p>
	Living in a <i>non-private dwelling</i> due to a lack of access to minimally adequate housing	<p>Not targeted to people who lack of access to minimally adequate housing</p> <p>Census data</p> <ol style="list-style-type: none"> 1. Living in a camping ground, motor camp, boarding house, hotel, motel, guest accommodation, commercial vessel, or marae; and 2. Dwelling is not misclassified student accommodation (<75% of census night residents in dwelling studying full-time); and 3. Usual address 'same as census night' or 'no fixed abode'; and 4. Low income (household-level (people in 'private' dwellings in camping grounds) or individual-level (people in all other dwellings)); or 5. Income unknown and receiving a means-tested benefit (household-level (people in 'private' dwellings in camping grounds) or individual-level (people in all other dwellings)). <p>PLUS</p> <ol style="list-style-type: none"> 6. Children identified at pro rata step. By non-private dwelling (those specified in step 1): No. children who satisfied steps 1–3 <i>multiplied by</i> (No. adults who satisfied steps 1–5 <i>divided by</i> no. adults who satisfied steps 1–3) [Totalled across all non-private dwellings specified in step 1]
3	Living as a temporary resident in a private dwelling due to a lack of access to minimally adequate housing	<p>Census data</p> <ol style="list-style-type: none"> 1. Living in a permanent private dwelling; and 2. Not an owner or in an owner's nuclear family; and 3. Not the reference person or in the reference person's nuclear family; and 4. Usual address is 'same as census night' or 'no fixed abode'; and 5. Low income (family-level if accompanied by family, individual-level if not); and 6. Dwelling is severely crowded (CNOS 2+ bedroom deficit).

Note: (1) The Jensen equalised household 'low income' thresholds were \$30,001 in 2013, \$25,001 in 2006, and \$20,001 in 2001, as per the corresponding NZDep low income threshold.

Figure 1 Algorithm for dividing the subject population into severely housing deprived, not severely housing deprived, and housing deprivation status cannot be determined categories

Notes:

(1) The 'living in severely inadequate housing?' filter appears twice in the algorithm: at the beginning, to separate people not living in severely inadequate housing from everyone else; and at the end, to separate people who are living in severely inadequate housing from those whose housing deprivation status is unknown.

(2) The 'living in a severely crowded dwelling?' filter applies only to temporary residents of permanent private dwellings. Temporary resident is operationally defined as a person who is neither an owner nor the reference person of a dwelling, nor are they in the nuclear family of an owner or the reference person.

(3) The 'pro rata allocation of children' filter only applies to children (people younger than 15 years) in non-private dwellings.

Size and characteristics of the severely housing deprived population in New Zealand

Introduction

This chapter presents statistics about the severely housing deprived population in New Zealand for 2001, 2006, and 2013.

As per the previous report, there are four important caveats about these statistics:

1. According to Statistics NZ confidentiality protocols, all numbers in the tables and figures derived from the census have been random rounded to base three. Children in non-private dwellings identified at the pro rata filter were then added to the appropriate categories. These latter figures were not rounded because they do not represent counts of individuals, but proportions (see Table 2 for calculation). Unrounded administrative data were also added to the census figures, though not all variables were available in the administrative data. Due to rounding, percentages may not total 100 percent.
2. Counts of five or fewer people are suppressed as per Statistics NZ confidentiality protocols; this is denoted in tables as 's'.
3. As these statistics were largely derived from the national census, tests of significance have not been applied.
4. The number of children identified as severely housing deprived in non-private dwellings at the pro rata filter contributes to the size of the severely housing deprived population. However, as this number does not represent actual individuals, it does not contribute to any of the results regarding characteristics of the population. Across all three censuses, these children account for 1-2 percent of the severely housing deprived population.

The results are presented in the following sections: count and prevalence; key demographic statistics, ethnicity and identification as Māori; and geography.

Count and prevalence

The prevalence of severe housing deprivation has accelerated over the study period (Tables 4 and 5). However, as Table 4 shows and as we would expect, the vast majority of the population are consistently identified as *not* severely housing deprived. The proportion of the population whose housing deprivation status could not be determined in census data has grown – largely due to missing income data.

Table 3 Number and percentage of the census subject population identified as ‘severely housing deprived’, ‘not severely housing deprived’, and ‘housing deprivation status cannot be determined’, 2001-2013

Category	2001		2006		2013	
	No.	%	No.	%	No.	%
Severely housing deprived	28,649	0.8	33,295	0.8	40,658 ⁽²⁾	1.0
Not severely housing deprived	3,639,845	97.2	3,942,626	97.1	4,110,701 ⁽²⁾	96.6
Housing deprivation status cannot be determined	76,038	2.0	83,953	2.1	103,236 ⁽²⁾	2.4
Total	3,744,534⁽¹⁾	100.0	4,059,876	100.0	4,254,597	100.0

Notes:

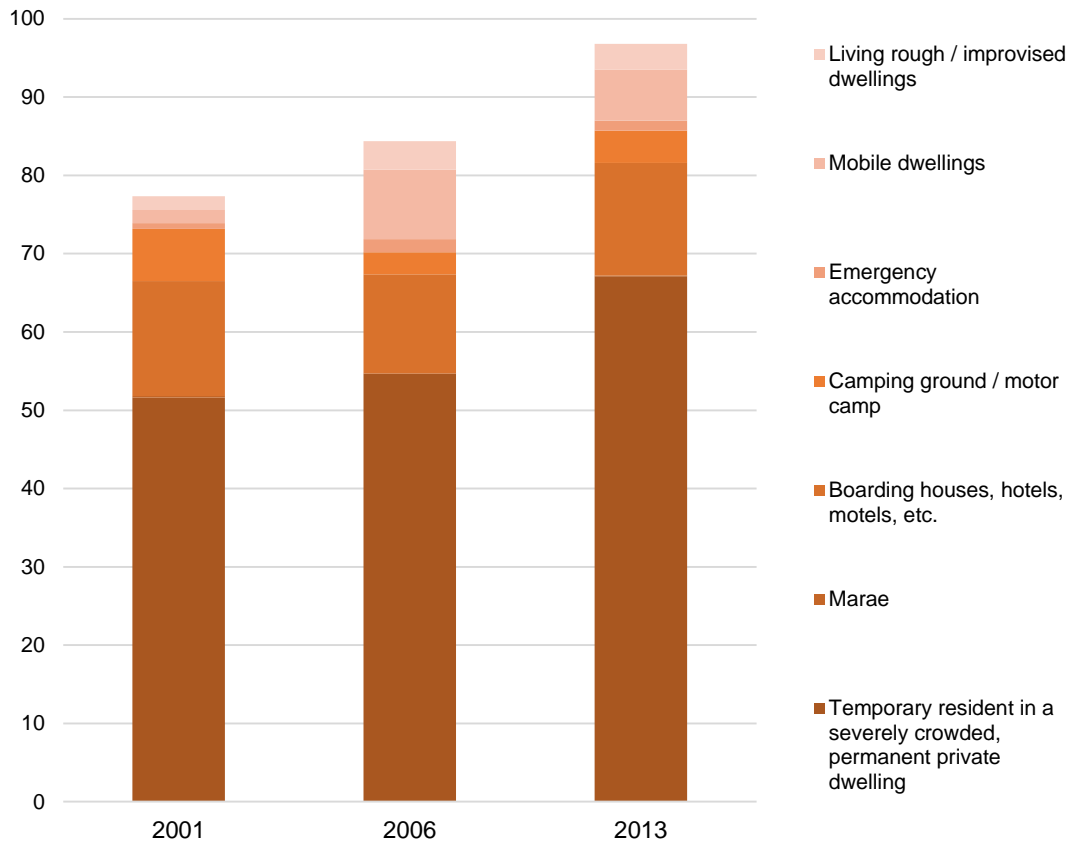

(1) The total for census subject population for 2001 was misprinted in Amore et al. (2013).

(2) These counts have been revised since an earlier press release (University of Otago, 2016).

Data source: Statistics New Zealand

Figure 2 and Table 4 shows the count and prevalence of severe housing deprivation over time, broken down by living situation. It is notable that the prevalence of people crowding into the others’ dwellings has been increasing, driving much of the rising prevalence of severe housing deprivation overall. The drop in severe housing deprived people living in mobile dwellings between 2006 and 2013 should be interpreted with caution, as it may be explained by coding differences, rather than real change. In response to our 2013 report, Statistics NZ more carefully classified mobile dwellings in 2013 compared with 2006, meaning more mobile dwellings were found to be in camping grounds and motor camps (Rosemary Goodyear, personal communication, 2016). The emergency housing category should not be compared over time due to small numbers and varying response rates.

Figure 2 Prevalence of severe housing deprivation per 10,000 population by living situation, 2001-2013

Data sources: Statistics New Zealand and emergency housing providers

Table 4 Severely housing deprived population by broad and specific living situation – count and prevalence, 2001-2013

Broad living situation		Specific living situation	2001		2006		2013		
			Count	Prev. per 10,000 pop'n	Count	Prev. per 10,000 pop'n	Count	Prev. per 10,000 pop'n	
1	Living <i>without habitable accommodation</i> due to a lack of access to minimally adequate housing	Living rough / improvised dwelling	660	1.8	1,464	3.6	1,413	3.3	
		Mobile dwelling	633	1.7	3,567	8.9 ⁽¹⁾	2,784	6.5 ⁽¹⁾	
		Subtotal	1,296	3.5	5,031	12.5	4,197	9.9	
2	Living in a <i>non-private dwelling</i> due to a lack of access to minimally adequate housing	Emergency accomm. (NGO-run) ⁽²⁾	Night shelter	47	0.1	49	0.1	26	0.1
			Women's refuge	43	0.1	260	0.6	30	0.1
			Other accomm. targeted at people who LAMAH	177	0.5	342	0.8	493	1.2
			Subtotal	267	0.7	651	1.7	549	1.3
		Commercial accomm.	Camping ground / motor camp	2,494	6.7	1,144	2.8	1,724	4.1
			Boarding houses, hotels, motels	5,486	14.7	5,089	12.6	6,127	14.4
			Subtotal	7,980	21.4	6,233	15.5	7,851	18.5
Marae	92	0.2	26	0.1	43	0.1			
3	Living as a <i>temporary resident in a severely crowded, permanent private dwelling</i> due to a lack of access to minimally adequate housing		19,284	51.6	22,005	54.6	28,563	67.1	
Total			28,917	77.4	33,946	84.3	41,207⁽³⁾	97.1⁽³⁾	

Notes:

(1) The drop in the mobile dwelling category may be largely attributable to a coding change – see main text.

(2) Emergency accommodation count and prevalence figures should not be compared over time because of small numbers and varying response rates.

(3) These counts have been revised since an earlier press release (University of Otago, 2016).

Data sources: Statistics New Zealand and emergency housing providers

The number of dwellings required to house the severely housing deprived population in 2013 is estimated at 15,000 to 25,900 dwellings, depending on whether every homeless person in a dwelling could be housed together (lower limit), or if every family unit would require a separate dwelling (upper limit). In 2006, this estimate was 12,900 – 21,200 dwellings, and in 2001, 11,200 – 18,900 dwellings.
